

Synorix Whitepaper

A Faster and More Usable Evolution of Sound Money

Version 1.1

April 2026

Executive Summary

Synorix is a Bitcoin fork designed to improve everyday usability while preserving the fundamental principles of sound, decentralized money. By reducing block time to 2.5 minutes and increasing block size to 8 MB, Synorix aims to offer faster confirmations and higher transaction capacity without compromising security or decentralization.

Synorix maintains Bitcoin's proven security model through SHA-256 Proof-of-Work, a fixed supply of 21 million coins, and the same halving schedule. It is launched as a **fair launch** with zero premine.

Why Synorix?

Bitcoin established the foundation of decentralized digital money. Synorix builds upon this foundation by addressing some of the practical limitations for daily use:

- Faster block times (2.5 minutes vs 10 minutes)
- Significantly higher throughput (8 MB blocks)
- Near-zero transaction fees in normal conditions
- Improved user experience for payments and transfers

Technical Specifications

- **Consensus Mechanism:** SHA-256 Proof of Work
- **Block Time:** 2.5 minutes
- **Block Weight Limit:** 8,000,000 weight units (~8 MB)
- **Total Supply:** 21,000,000 SNRX
- **Halving Interval:** Every 210,000 blocks
- **Difficulty Adjustment:** Every 2016 blocks (approximately 3.5 days)
- **Address Formats:** Base58 (starts with S) and Bech32 (snrx1...)
- **Launch Type:** Fair launch (0% premine)

Tokenomics

- Fixed supply of 21 million SNRX
- No premine, no founder allocation, no ICO
- Identical halving schedule with Bitcoin for predictability
- All coins will be mined through Proof-of-Work

Roadmap

Phase 1 (Q2 2026)

- Main codebase development and testing
- Testnet launch
- Community building

Phase 2 (Q3 2026)

- Mainnet launch
- Block explorer and wallet support
- Exchange listings

Phase 3 (Q4 2026 and beyond)

- Ecosystem development
- Merchant adoption
- Further protocol improvements

Security

Synorix inherits Bitcoin's battle-tested security model. All changes are made conservatively with a strong focus on stability and security. The project encourages independent code review and security audits.

Conclusion

Synorix is not here to replace Bitcoin, but to offer a practical, faster alternative for users who need quicker confirmations and lower fees while staying true to the principles of sound money.

We invite developers, miners, and users who believe in decentralized money to join us in building Synorix.
